Education

NED University of Engineering and Technology (CGPA: 3.55)
Bachelor in Software Engineering (BESE)
2023 - Present

Experience

Associate Software Engineer
Inhouse Software (July 2026 – Present)
- Worked on a system built with a PHP and Craft CMS backend and a Vue.js frontend.
- Managed frontend UIs while working on backend functionality and asynchronous queue jobs.

Backend Developer
Pantoglasses (Dec 2025 – Jun 2026)
- Built custom WordPress plugins using PHP to introduce tailored backend functionalities and features.
- Maintained and optimized backend code architecture alongside PHP-based frontend layouts.

Web Developer Intern
Techelix (Sep 2025 – Jan 2026)
- Developed a custom Content Management System (CMS) utilizing React.js for interactive frontend workflows.
- Designed and integrated MongoDB schemas to handle scalable document storage, data retrieval, and API communication.

Website Developer & Manager
HussainMustafa.com
- Developed and maintained the website ensuring performance and responsiveness.
- Created & optimized blogs on Flutter, Dart, and Python with SEO best practices.

Freelance Developer (Mobile & Web)
- Built web applications using React, Next.js, HTML, CSS, and JavaScript, and worked with automation tools to automate workflows
- Developed mobile applications using Flutter (Dart) with focus on UI, navigation, and feature implementation.

Skills

- Professional Skills: React, Next.js, Vue.js, HTML, CSS, JavaScript, PHP C++, SQL, MongoDB, Firebase, Supabase, Python, Flutter (Dart), WordPress, n8n, Git, Figma, Google Colab, Kaggle, VS Code, Android Studio
- Additional & Soft Skills: SEO, Content Writing, Manual Testing, Test Case Design, SDLC & STLC, Public Speaking, Written & Verbal Communication, Team Collaboration, Time Management, Critical Thinking

Certifications

- Web Development (TE-Links)
- Bano Qabil 2.0 Certificate, Dart and Flutter
- Certificate in IT (CIT), Skills Development Council
- Freelancing (DigiSkills)
- Affiliate Marketing (DigiSkills)

Achievements

- First Position, DevDay25 (SQL Saga)
- First Position, NED Evolve25 (AI-ML Module)

Projects

SEONeuralize – AI-Powered Search Intent Framework *(SBERT, Playwright, React, Vite)* (https://seo-neuralyze-frontend.vercel.app/)
- Built a Sentence-Transformers AI system to detect keyword cannibalization at 85% accuracy.
- Developed a high-speed, "stealth" web crawler that mimics human behavior to safely collect and clean data from large enterprise websites.

PneumoScan – Pneumonia Diagnostic System *(AI, Python, React, Vite)* (https://pneumo-scan-theta.vercel.app/)
- Built an AI system that combines Chest X-rays with patient symptoms to identify pneumonia, achieving a high 97.8% sensitivity.
- Developed an AI "Guardrail" to automatically block non-medical photos and a safety rule to flag high-risk patients with unclear X-rays.

Remote Nurse Practitioners – Job Board Platform *(Next.js, Prisma, PostgreSQL (https://remotenursepractitioners.com/)*
- Built a specialized job board using Next.js and Prisma to connect nurse practitioners with fully remote employment opportunities.
- Created an organized database setup to store, filter, and display active nursing job listings with fast loading speeds.

Spacia – AR Furniture E-Commerce App *(Flutter, Firebase) (https://github.com/hbnasir23/Spacia)*
- Built a mobile e-commerce app for furniture and home décor with interactive 3D models and AR "view in my space" functionality.
- Features include role-based user, business, and admin dashboards, product management, and Stripe-powered payments.

HealthLab – Smart Health App *(Flutter, Supabase) (https://github.com/hbnasir23/heath_lab)*
- Built a health monitoring app with wearable band integration, real-time vitals, and role-based dashboards.
- Features include telehealth, appointment booking, and pharmacy module using PostgreSQL on Supabase.

Oreon Recipes – Recipe Manager *(C#, WinForms)*
- Developed a desktop app with login, categorized recipes, video tutorials, and ingredient lists.
- Integrated Access DB, designed architecture, and implemented key features.

Lets Travel – Travel Companion App *(Flutter, Dart)*
- Developed a mobile app to explore destinations and browse hotel details with room selection.
- Features include login, discovery, reviews, booking info, and user activity pages.

AI Blog Automation System – Content Pipeline *(n8n, OpenAI, WordPress)*
- Built an automated system to research, generate, structure, and publish long-form blog posts to WordPress.
- Integrated Google Sheets, AI models, SEO metadata generation, internal linking, and category/tag automation.

Dizzables – Sign Language Translation App *(Flutter, Dart)*
- Built a mobile app to connect with ESP32-based smart gloves and receive real-time gesture data via Bluetooth.
- Displayed translated gestures, visual feedback, and maintained a history of recognized signs.
